SUMMARY

Engineer who thinks in systems and ships in sprints. I'm the person who automates the boring stuff, builds the thing before the meeting about building the thing, and reads API docs for fun on a Saturday. Computer Engineering grad with a founder's bias toward action, equally comfortable wrangling PyTorch tensors, spinning up cloud infrastructure, or pitching a client on why their manual workflow needs to die. I bring curiosity that doesn't quit, code that actually runs, and the rare ability to explain both to non-technical humans.

TECHNICAL SKILLS

Languages:	Python, C++, JavaScript, TypeScript, SQL, HTML/CSS, Bash
Frameworks:	React, Next.js, Node.js, Express.js, FastAPI, Flask, PyTorch, NumPy, Pandas, OpenCV
Cloud/DevOps:	AWS (EC2, S3, Lambda), Azure, Docker, Git, GitHub Actions, CI/CD, Linux
Data & Tools:	PostgreSQL, MongoDB, Supabase, Redis, Power BI, n8n, REST APIs, Agile/Scrum, Jira

EXPERIENCE

Undergraduate Research Assistant — York University — Vision & Image Processing Lab Jun 2023 – Jan 2024

- Implemented PyTorch HRNet pose-estimation pipeline on multi-camera sports dataset; improved PCK@0.2 accuracy by 12%.
- Automated camera calibration and homography validation using Python, OpenCV, and NumPy; reduced preprocessing effort by 30%.
- Conducted hyperparameter sweeps with TensorBoard and Weights & Biases; delivered reproducible experiment reports to principal investigator.

Capstone Project Lead — York University Oct 2022 – Apr 2023

- Led 5-member engineering team building a cloud-based sales analytics dashboard tracking store-level inventory, revenue, and customer behavior using SQL, Python, and Power BI.
- Designed and automated forecasting models for sales trend analysis and inventory flow by location, improving scenario planning for territory coverage optimization.
- Presented executive-level reports with actionable visual insights to professors and industry stakeholders, demonstrating strong data storytelling skills.

PROJECTS

Onboardy — Automation Agency — Founder

- Founded a workflow automation agency delivering custom end-to-end automation solutions for businesses using n8n, Python, and third-party API integrations.
- Designed and deployed automated client onboarding flows, CRM pipelines, and cross-platform data sync workflows, reducing manual operational overhead for clients.
- Managed full client lifecycle from discovery and requirements gathering through solution architecture, deployment, testing, and ongoing support.

ForwardScan — AI Email Security Platform — Personal Project

- Engineered a full-stack phishing detection platform with Python, FastAPI, and OpenAI API that analyzes forwarded emails and returns structured risk assessment reports via Mailgun.
- Integrated VirusTotal API for URL and attachment threat scanning, achieving automated multi-source threat intelligence aggregation with structured error handling.

TTC Easy — Real-Time Ontario Transit Platform — Personal Project

- Architecting a full-stack transit application using Next.js, Node.js, Supabase (PostgreSQL + pgvector), and MapLibre for real-time GTFS data from TTC, GO Transit, and regional agencies.
- Implementing RAG-based AI chatbot using Claude API and vector embeddings for natural-language transit queries with commute pattern learning.

EDUCATION

BSc Science, Computer Engineering — York University, Toronto, ON

Relevant Coursework: Machine Learning, Computer Vision, Neural Networks, Parallel Computing, Real-Time Embedded Systems, Cloud Architecture, Software Engineering Processes, Data Structures & Algorithms

LEADERSHIP

- Mentored first-year engineering students on Git workflows (feature branching, PR reviews), Docker-based reproducible environments, and CI/CD pipelines using pytest and GitHub Actions.
- Organized a university cultural festival coordinating multiple student clubs, managing logistics and budgeting; drove a 30% increase in event attendance and cross-cultural engagement.
